

the same time, the fact that the two countries have similar political systems and similar political culture may have contributed to the similar results.

It is interesting to note that the results of the present study are similar to those of the study by Wong and Chan (2001) on the political participation of Hong Kong citizens.

There are a number of limitations of the present study. First, the sample size is small.

Second, the data are self-reported and may be subject to common method bias.

Third, the study is cross-sectional and does not allow for the examination of causal relationships.

Fourth, the study is limited to the political participation of Hong Kong citizens.

Finally, the study does not take into account the role of the media in political participation.

Despite these limitations, the present study provides some interesting insights into the political participation of Hong Kong citizens.

It is hoped that the findings of the present study will be useful to researchers and practitioners alike.

Finally, it is worth noting that the present study is a preliminary study and further research is needed to confirm the findings.

Steel and cables

Over the years AVT Europe NV has built up great expertise in the steel and cable industry.

Both our Transport Solutions and Automation & Robotics departments are at ease with handling heavy materials in a challenging environment.

Specific challenges in the steel industry for which AVT Europe NV has a solution:

- Handling of heavy materials
- Transport of heavy materials
- Moving large reels
- Quality assurance
